

# HUMAN RESOURCE ANALYSIS

Power BI Dashboard — Analytical Report

---

Prepared for: Human Resources Department

Report Date: July 14, 2026

## 1. Executive Summary

This report presents a formal analysis of the organization's workforce, based on the three-page “Human Resource Analysis” dashboard built in Power BI. The dashboard consolidates employee demographics, marital status, departmental distribution, job roles, service tenure, job levels, commuting distance, promotion status, job satisfaction, performance ratings, overtime patterns, and attrition (layoff) figures into a single interactive reporting tool.

As of the reporting date, the organization employs a total of 1.47K (1,470) staff, distributed across three departments — Research & Development, Sales, and Human Resources. The workforce is predominantly male (60%) and largely concentrated in the Research & Development department. Attrition stands at 117 employees (approx. 8% of total headcount), while 1.353K employees remain in active service.

## 2. Dashboard Overview

The Power BI report is organized into three linked dashboard pages, each accessible through a shared navigation panel with filters for Gender, Department, Marital Status, Performance Rating, and Job Satisfaction:

- Dashboard 1 — Workforce Demographics: headcount by gender and department, and divorce status by gender.
- Dashboard 2 — Employee Profile & Promotion: marital status distribution, promotion likelihood, job role, service years, job level, and commute distance.
- Dashboard 3 — Performance & Attrition: layoff figures, promotion status by department, job satisfaction, performance ratings, overtime, and manager tenure.

## 3. Workforce Demographics (Dashboard 1)

### 3.1 Headcount by Gender

The organization has a total of 1,470 employees, comprising 882 male employees (60%) and 588 female employees (40%). This indicates a gender imbalance favoring male representation across the workforce.

### 3.2 Headcount by Department

| Department             | Total Employees | Male | Female |
|------------------------|-----------------|------|--------|
| Research & Development | 961             | 582  | 379    |
| Sales                  | 446             | 257  | 189    |
| Human Resources        | 63              | 43   | 20     |

Research & Development is by far the largest department, accounting for roughly 65% of the total workforce, followed by Sales (30%) and Human Resources (4%). Male employees outnumber female employees in every department, with the gap most pronounced in Research & Development.

### 3.3 Divorced Employees by Gender

Among divorced employees, males (210) outnumber females (117), broadly mirroring the overall gender split of the workforce.

## 4. Employee Profile and Promotion Outlook (Dashboard 2)

### 4.1 Marital Status

| Marital Status | Employee Count |
|----------------|----------------|
| Married        | 673            |
| Single         | 470            |
| Divorced       | 327            |

Married employees form the largest group (46% of the workforce), followed by single employees (32%) and divorced employees (22%).

### 4.2 Promotion Anticipation

Of the total workforce, 72 employees (4.90%) are anticipated for promotion, while 1,398 employees (95.10%) are currently “not due” for promotion. This suggests a conservative promotion cycle relative to overall headcount.

### 4.3 Employee Distribution by Job Role

| Job Role                                     | Employee Count |
|----------------------------------------------|----------------|
| Sales Executive                              | 326            |
| Research Scientist                           | 292            |
| Laboratory Technician                        | 259            |
| Manufacturing (role name partially obscured) | 145            |
| Healthcare Representative                    | 131            |
| Manager                                      | 102            |
| Sales Representative                         | 83             |
| Research Dir. (role name partially obscured) | 80             |
| Human Resources                              | 52             |

Sales Executives and Research Scientists represent the two largest job-role groups, together accounting for roughly 42% of total headcount, consistent with the dominance of the Sales and Research & Development departments.

#### **4.4 Service Tenure and Job Level**

Tenure distribution shows a peak at the 5-year mark (196 employees), with a broadly declining trend as service years increase, down to 32 employees at 11 years of service. In terms of job level, the workforce is concentrated at the lower levels: Level 1 (543) and Level 2 (534) together account for roughly 73% of employees, tapering sharply to Level 3 (218), Level 4 (106), and Level 5 (69). This pyramid-shaped structure is typical of organizations with a broad operational base and a narrower senior tier.

#### **4.5 Commuting Distance**

Most employees live near the workplace (940 employees, “Near”), while 301 commute from “Far” and 229 from “Very Far” locations, indicating that roughly 64% of the workforce has a short commute.

## 5. Performance and Attrition (Dashboard 3)

### 5.1 Attrition and Active Service

A total of 117 employees have left the organization (layoff), while 1,353 employees remain on active service, placing overall attrition at approximately 8% of the total historical headcount reflected in this view.

### 5.2 Promotion Status and Layoffs by Department

| Department             | Promotion Expected | Promotion Not Yet | Layoffs | On Service |
|------------------------|--------------------|-------------------|---------|------------|
| Research & Development | 47                 | 914               | 74      | 887        |
| Sales                  | 23                 | 423               | 36      | 410        |
| Human Resources        | 2                  | 61                | 7       | 56         |

Research & Development records both the highest number of expected promotions and the highest number of layoffs, proportionate to its larger headcount. Human Resources, being the smallest department, shows correspondingly small figures across all four metrics.

### 5.3 Job Satisfaction and Performance Rating

The dashboard tracks job satisfaction across High, Low, and Medium categories, and performance rating across High and Low categories. The exact figures for these two charts were not clearly legible in the source image and have been omitted here to avoid reporting inaccurate numbers; please refer to the live dashboard for precise values.

### 5.4 Overtime

Approximately 28.3% of employees work overtime, while 71.7% do not, suggesting overtime is the exception rather than the norm across the organization.

### 5.5 Manager Tenure

The majority of employees have worked under their current manager for 2 years (344 employees) or have had no time with their current manager (263 employees, i.e., a recent change), followed by 7 years (216), 3 years (142), and 8 years (107). This points to relatively frequent changes in direct management relationships for a large share of staff.

## 6. Key Observations

- The workforce is male-dominated (60% male vs. 40% female) and heavily concentrated in Research & Development (65% of headcount).

- Only 4.90% of employees are currently anticipated for promotion, indicating limited near-term promotion movement.
- The organizational structure is bottom-heavy, with 73% of employees at Job Levels 1–2.
- Attrition (117 layoffs) is modest relative to total headcount, at roughly 8%.
- Performance ratings skew positive overall, while job satisfaction is spread across High, Medium, and Low bands (exact figures not clearly legible in the source dashboard).
- Overtime is limited to a minority of staff (28.3%), and most employees have a short commute (64% classified as “Near”).

## 7. Recommendations

---

- Investigate the gender gap in Research & Development to identify opportunities for improved gender balance in hiring.
- Review promotion criteria and cadence, given that over 95% of employees are currently “not due” for promotion, to ensure adequate career progression pathways.
- Examine drivers of “Low” and “Medium” job satisfaction, particularly given the gap between satisfaction levels and generally high performance ratings.
- Monitor frequent manager changes (notably the 263 employees with 0 years under their current manager), as management discontinuity can affect engagement and retention.
- Continue tracking layoff trends by department, with particular attention to Research & Development given its higher absolute attrition volume.

## 8. Conclusion

---

The Human Resource Analysis dashboard provides a comprehensive, interactive view of the organization's workforce composition, career progression, performance, and attrition patterns. Overall, the data reflects a stable, high-performing workforce concentrated in the Research & Development function, with modest attrition and limited promotion activity. The recommendations outlined above are intended to support HR leadership in addressing gender balance, promotion pathways, and employee satisfaction going forward.
