

HUMAN RESOURCE ANALYSIS

Power BI Dashboard — Analytical Presentation

Prepared for: Human Resources Department

Dashboard Overview

A three-page Power BI report covering workforce demographics, promotion outlook, and performance

01

Workforce Demographics

Headcount by gender and department; divorce status by gender.

02

Employee Profile & Promotion

Marital status, promotion likelihood, job role, tenure, job level, and commute distance.

03

Performance & Attrition

Layoffs, promotion status by department, job satisfaction, performance rating, overtime, manager tenure.

Workforce Snapshot

Total headcount and gender composition

Employees by Department

Divorced Employees by Gender

Department Composition by Gender

Research & Development dominates headcount across both genders

Marital Status & Promotion Outlook

Married employees form the largest group; promotion movement is limited

Promotion Anticipated

72

4.90% of workforce

Not Due for Promotion

1,398

95.10% of workforce

Employee Distribution by Job Role

Sales Executives and Research Scientists are the largest role groups

Note: two role labels were partially obscured in the source dashboard; employee counts shown are as read.

Service Tenure & Job Level

Tenure peaks at 5 years; the org structure is concentrated at entry job levels

Commuting Distance

Roughly 64% of employees live near the workplace

Attrition and Promotion Status by Department

Research & Development shows the highest volumes across all four metrics

Department	Promotion Expected	Promotion Not Yet	Layoffs	On Service
Research & Development	47	914	74	887
Sales	23	423	36	410
Human Resources	2	61	7	56

Overtime & Manager Tenure

Overtime is limited to a minority of staff; many employees have had a recent manager change

Job Satisfaction and Performance Rating figures were not clearly legible in the source dashboard and are omitted here for accuracy.

Key Observations

- 1 The workforce is male-dominated (60% male vs. 40% female) and heavily concentrated in Research & Development (65% of headcount).
- 2 Only 4.90% of employees are currently anticipated for promotion — limited near-term promotion movement.
- 3 The organizational structure is bottom-heavy: 73% of employees sit at Job Levels 1–2.
- 4 Attrition (117 layoffs) is modest relative to total headcount, at roughly 8%.
- 5 Overtime is limited to a minority of staff (28.3%), and most employees have a short commute (64% classified as “Near”).
- 6 A large share of staff (263 employees) have had 0 years with their current manager, indicating frequent management changes.

Recommendations

- 1 Investigate the gender gap in Research & Development to identify opportunities for improved gender balance in hiring.
- 2 Review promotion criteria and cadence, given that over 95% of employees are currently “not due” for promotion.
- 3 Verify job satisfaction and performance rating figures directly in the live dashboard, as source images were not fully legible.
- 4 Monitor frequent manager changes (263 employees with 0 years under their current manager) and their effect on engagement.
- 5 Continue tracking layoff trends by department, with particular attention to Research & Development given its higher attrition volume.

Conclusion

The dashboard reflects a stable, high-performing workforce concentrated in Research & Development, with modest attrition and limited promotion activity. Addressing gender balance, promotion pathways, and employee satisfaction are the key opportunities identified for HR leadership.

Thank you
